

SHAPING THE PORT OF THE FUTURE

The societal, economic and management challenges

Civitavecchia | 10th April 2018

Within the cycle of events organized by The MediTelegraph and centred on shipping and logistic industries, the “European” strand, realized in partnership with On the MoS Way, continues with a specific focus on the “**Port of the future**”: ports are key factor for the **European economy** for a global trade scenario and the internal market, both as commercial and passengers hubs. Ports are strictly linked to the **regional development**; the connection among their growth and a positive impact **on society and environment** is essential.

The conference analyzes the “**links**” that contributes to shape the “**Port of the future**”: links among **ports**, links with **surroundings** and with **society**, links with the **integrated and sustainable logistic chain**, adding a specific focus on **the European System of Port Services Regulation**.

Each link has inside **specific challenges to be faced and managed**.
